

## Characteristics:

### General Description:

The D5095S is a relay module suitable for the switching of safety related circuits, up to SIL 3 level according to IEC 61508:2010 Ed. 2 for high risk industries. It provides isolation between input and output contacts.

A wide compatibility towards different DCS/PLC is guaranteed: driving line pulse testing, executed by DCS/PLC, is permitted by a dedicated internal circuit, to prevent relay and LED flickering.

D5095S has 2+2 SPST relay contacts connected in parallel and then in series to avoid spurious trip and to increase availability (see function diagram).

High availability SIL 3 Safety Function for both NE load and F&G / ND load is available.

Load can be isolated from supply on both polarities: +/AC, -/AC.

Mounting on standard DIN-Rail or on customized Termination Boards, in Safe Area or in Zone 2.

### Functional Safety Management Certification:

G.M. International is certified by TUV to conform to IEC61508:2010 part 1 clauses 5-6 for safety related systems up to and included SIL3.
