

Characteristics:

General Description:

The single channel Relay Output, D5290S is a relay module suitable for the switching of safety related circuits, up to SIL 3 level according to IEC 61508:2010 Ed.2 for high risk industries.

It provides isolation between input channel and output contacts.

Three mutually exclusive (by DIP-Switch programming) monitoring circuits are provided:

- 1) line input monitoring, to allow DCS/PLC line monitoring function: when enabled, the module permits a wide compatibility towards different DCS/PLC. Driving line pulse testing, executed by DCS/PLC, is permitted by a dedicated internal circuit, to prevent relay and LED flickering.
- 2) low voltage input monitoring: when enabled, the module reflects a high impedance state to the control unit when the driving voltage is below the specified threshold.
- 3) short circuit fault detection: when enabled, it allows DCS/PLC to detect short circuit fault of module.

D5290S provides two NO contacts for normally energized load and a NC contact for service purpose, in order to switch the NE load on both supply lines.
